Subject: RE: Parchment data

I have attached the updated spreadsheet with all of the data I have for Parchment. I need to track down some manganese samples and a PFAS lab report. Please let me know if you have any questions.
Heather

Heather

Please forward a summary of the requested results to Region 5, Eric, Amy and me. Thanks

Can we get our lead and copper results to Tom?

Eric: Wednesday work better for me. I have 30 minutes free on Thursday (11:00 – 11:30) which I assume is not enough time but if some time on Thursday works for you and Tom Speth, I will make it work.

What kind of lead results are you seeing in the second draw?

Tom

Eric: Thank you for the update. I think a call would be good regarding what is being seen with respect to the sampling results and what criteria will be used to eventually announce that the tap water can be used for consumption.

Tom, we had a slight spike in the PFAS numbers over the weekend with some going up to 20 ppt (the first samples were at 2 ppt or non-detect). Those levels have come back down and we anticipate they

will stay down now. We also had some high lead and copper results. We are taking two draws samples. It is the second draw that has been high with the first draw showing number similar to historical values for the sites. We will continue to take lead and copper samples daily and believe some of the issue in the second draws may be from the unprecedented flushing of the system. The high initial manganese results have also come back down. We are also considering boosting the phosphate dose but want to be careful on changing pH as well.

Before we lift the do not drink order we would like to have a conference call with your staff and ORD to go over the data and make sure we have the water chemistry on the right track. I anticipate either towards the end of the day tomorrow or Thursday being the best time to go over the system performance. Let me know if this would work for you.
